Pixel® CO2

Pixel® CO2 resurfacing is safe and comfortable

The newest break-through in laser skin resurfacing

Pixel treatments are safe and effective, without injections or surgery. You can expect your skin to be flushed and red after the treatment-something similar to a sun burn. Your doctor may also prescribe an over-the-counter pain medicine to make you more comfortable. These symptoms are a normal part of the healing process and should improve quickly.

What is Pixel CO2 laser?

LASER SKIN RESURFACING that lifts away years from your face and stimulates new collagen to grow. It improves your skin's texture and tone to fight fine lines, wrinkles, and even acne scars.

It is an improvement on the older CO2 lasers because the laser beam has been "fractionalized", or divided into tiny pinpoints of light that actually remove surface skin damage. At the same time, the light reaches the lower layers of skin to stimulate collagen to fill in wrinkles and tighten.

Is there any discomfort?

It is not painless, but it is quick and tolerable with the application of numbing cream prior to the procedure. Numbing cream can be purchased at our office before your visit, or, by appointment, we can apply it for you if you arrive an hour before your procedure.

Is there any healing time?

It generally only takes a 4-day weekend to heal for most people. It heals quickly and is much safer than the older CO2 treatments because the repaired skin has only to cover over the surface area of the tiny dots, rather than the whole treated area.

You'll see dramatic improvement in the tone and texture of your skin.

When will I see a difference?

There will be enough improvement after just one treatment for many patients to be satisfied. Skin will look gradually better over the few weeks following treatment. In most cases, though, three treatments should produce the results that you would like to see.

What areas can I have treated with the Pixel CO2?

We are currently treating face, neck, chest and backs of the hands.

Who will be performing my treatments?

These treatments will be performed by Dr. Cooperrider or one of our very experienced physician assistants.

If you are ready to see some reduction in fine lines and wrinkles, and discoloration created by aging and sun damage, you can request a free consultation. Call the Laser Treatment Center at (425)296-0270 or visit www.kirklandlaser.com to set up an appointment.
